*Upper Row = Total number / Middle Row = Females / Lower Row = %
 *Numbers represent the number of females internally. Percentages are based on the total number of females employed by faculty
 *Since some have chosen "unknown" to describe their plans after graduation, this figure does not equal the total number of graduates, even when totaling all in the self-employed, continuing education, study abroad, entering various schools, and various exam exams categories.
 *Because all percentages in this table are rounded, they may not equal 100% when totaled.
