【COVID-19 Information: Please pay attention to the following basic points】

Recently, the number of people in their 20s and 30s infected with COVID-19 has been increasing in Japan.

In other countries where many people have been infected with COVID-19, some of the young infected people have become seriously ill. Please pay attention to the following basic points and try to act in order to protect yourself and the lives of the important people around you.

*Avoid closed spaces with poor ventilation

*Avoid crowded places with many people nearby whether inside or outside

*Avoid close-contact settings: keep a reasonable distance (1.5~2m) from others

In many large countries, such as New York, London, Paris, the place with higher infection risks of COVID-19, "Social Distancing" is highly recommended in order to slow the rate at which the infection spreads.

Social Distancing is the practice purposefully reducing close contact between people.

Try to keep a moderate distance(1.5~2m) and avoid as close an interaction as possible.

If you must go out, DO NOT gather in groups, DO NOT shake hands or hug.

Make sure that each person has a strong will that we reduce our chances of catching the virus and spreading it to our loved one. You CAN help prevent COVID-19!
