## Lower Palaeolithic Industry of An Khe in central Vietnam

2023年7月1日 土 14:30~  
15:30

明治大学駿河台キャンパスリバティタワー 1074教室（7階）

講演詳細（使用言語は英語。通訳はおりません。）

Discoveries of the early palaeolithic sites in An Khe are evidence that high land in central Vietnam was the home of a prehistoric community about 0.8 million years ago. The stone artifacts found from these sites lay in the sediment layers of the middle Pleistocene. Most of them were made of quartz and the others were made of quartzite, with typical forms of handaxes, bifaces, and pointed tools. The An Khe findings have changed our conception of prehistory and man's evolution in Southeast Asia.

講師紹介 Dr. Nguyen Gia Doi
